VsCodeHelp-Assignment

Instruction for running the code:-

Step 1:- Begin by cloning the repository to your local machine and opening the designated file in the Visual Studio Code editor.

Step 2:- Install the necessary Node modules by following these steps:

a. Open the terminal.

b. Execute the command: **npm install**. Once completed, you will observe the newly installed node modules on the left side within the Visual Studio Code interface.

Step 3:- Initiate the application by running the command: **npm run start**.

This action will display a local host link, accessible through your preferred web browser.
